

# Physics

Physics provides an understanding of the Universe. This is essential for enlightenment because as Buddha said "Right understanding is part of enlightenment". Physics is only incomprehensible if it is wrong. True physics is simple and delightful and understandable by everyone. Neither is there any need for dichotomy between science and spirituality. Only a false science denies the spirit. True science reveals the 'spiritual' multi-dimensional nature of the Universe

The Power of Physics is a natural complement to Puja, Satsang and Seva because it provides an understanding of the Universe in terms of consciousness rather than materialism. In this remarkable little book the bedrock of science is revealed as nothing but the illusion of Maya. Buddha said maya is the root of human suffering.

Materialism is overthrown and replaced with a single unifying principle that explains all the particles and forces of nature. It took Einstein the General Theory of Relativity to account for curved space. Herein it is explained in a single paragraph. Richard Feynman said there was no fundamental understanding of nuclear energy in physics. You will gain a fundamental understanding, not only of nuclear energy but the whole of physics in this tiny little book. And Quantum theory will have you blushing as you take a peep at the sex life of sub-atomic particles.

The conclusion is that particles of energy are more like thoughts than things. The Universe is a mind. It is conscious and intelligent from the minute atom to the mighty galaxy. You have the totality of this universal consciousness inside you. You are it! All you have to do is know yourself, awaken to who you truly are, unlock your true power and potential; open your wellspring of love and joy. You do that through the practice of Puja, Satsang and Seva.
